

Recommendation Letter

To whom it may concern,

I am pleased to recommend Sebastian Tollaksvik, who carried out his bachelor's internship at INESC TEC in the Network Operations, Management and Automation area. I lead this area within the Centre for Power and Energy Systems, and had the opportunity to follow the progress and outcomes of his work in the context of our team's research activities.

During this period, Sebastian developed a natural language interface framework for a domain-specific API, with the objective of enabling users to interact with specialised software functionality through AI-agent-based natural language workflows.

Throughout his work, Sebastian demonstrated a remarkable ability to operate independently and autonomously. He quickly understood the goals of the project, became familiar with the pre-existing API in a short period of time, and was able to progress with minimal guidance. His work was completed much faster than initially expected, while still maintaining a strong level of technical quality.

One of Sebastian's most notable strengths was his capacity for self-directed learning. He independently studied best practices for AI-agent design and successfully applied them to the development of the proposed framework. This included making sound architectural decisions, structuring the interaction between the natural language layer and the underlying API, and ensuring that the resulting system was functional, extensible, and well aligned with the project's goals.

In addition, Sebastian showed strong programming skills. His code was well structured, technically sound, and demonstrated a level of maturity beyond what is typically expected at bachelor's level. He was able to deal effectively with the practical challenges of integrating natural language interfaces with domain-specific software components.

Overall, Sebastian proved to be a highly capable, autonomous, and fast-learning intern, with strong technical abilities and excellent potential for future work in software engineering, artificial intelligence, and AI-agent-based systems. I am therefore very happy to recommend him without hesitation.

Sincerely,

Gil Sampaio

Network Operations, Management and Automation Area Leader
