Education

Artificial Intelligence Engineer – Master

Started: 07.2023, Graduation Date: 06.2028

The arctic university of Norway (UiT)

Specializing in Machine Learning

Study Abroad

Porto, Portugal

Study abroad coursework in Faculty of Engineering (FEUP) and Faculty of Sciences (FCUP), University of Porto
09.2025 – 07.2026

Kopervik high school, Specialization in natural sciences

Kopervik, Karmøy municipality

Graduation Date: 16.06.2022

Job experience

Institute of Computer Science, UiT The Arctic University of Norway

Tromsø

Group teacher and mentor

08.26 - present

- Leads weekly seminars in high- and low-level programming languages through problem-based learning, guiding STEAM students in debugging and algorithmic thinking so they learn to translate theory into working code
- Assesses students' code submissions against the course's learning objectives and provides structured feedback, helping students identify errors independently and improve code quality over time

INESCTEC

Porto, Portugal

AI Engineer

02.2026 - 06.2026

- Built a natural language interface for power grid simulation at one of Europe's leading research institutes, enabling engineers without programming knowledge to control complex APIs in plain English
- Implemented per-agent RAG pipeline and two-stage LLM architecture separating tool selection from interpretation, reducing hallucination and increasing transparency for end users
- The system is now actively extended by other INESCTEC researchers, building new agents on the same architecture, without modifications to the core infrastructure

Royal Norwegian Navy, Coast Guard

Norwegian coast

Artilleryman and Firefighter

08.2022 – 08.2023

- Operated and maintained shipboard artillery and weapon systems safely
- Assisted in firefighting and smoke diving operations
- Strengthened teamwork, discipline and problem-solving skills in high-pressure maritime environments

Leadership & Activities

Norges arktiske universitet (UiT)

Tromsø, Tromsø kommune

Student Representative, AI Engineering Program Board

08.2026-present

- One of two student representatives voted in to represent the entire AI Engineering degree program, with voting rights on curriculum content and quality assurance
- Participates in board work on learning environment and strategic direction for the full program, including review of program evaluations, key metrics, and study quality

The arctic university of Norway (UiT)

Tromsø, Norway

Elected class representative

08.24-08.25, 08.26-present

- Acted as a liaison between students and faculty to communicate concerns and suggestions
- Organized meetings and represented the program in academic and social discussions

Skills & Interests

Tech stack: Python, C, Git, REST API, PyTorch, TensorFlow, Stable-Baselines3, OpenCV, HuggingFace, Scikit-learn, Webots, ChromaDB, OpenAI API, Gemma (self-hosted)

Language: Norwegian (mother tongue), English (fluent)

Projects: Sim-to-Real Robustness Research in Autonomous Robot Navigation (PPO/DQN, 2M+ timesteps, 100% success rate with 90% LiDAR reduction), DeepSyntax LLM VS Code Extension, Computer Vision Ophthalmology Assistant, In-memory Document Search (C) ([GitHub page](#))

Interests: Rock climbing, skiing, hiking, cooking and travelling
